FOREWORD FROM GENERAL CHAIR 4th FIRST 2020 INTERNATIONAL CONFERENCE

Assalamu'alaikum wr wb,

Thank to Allah SWT, the most gracious, the most merciful, and may prayers and peace be upon our prophet, Muhammad SAW and upon his companions

First of all, I also would like to say thank you very much for choosing FIRST 2020 and SNAPTEKMAS 2020. I also would like to convey my warm welcome to all FIRST 2020 and SNAPTEKMAS 2020 keynote speakers and all participant.

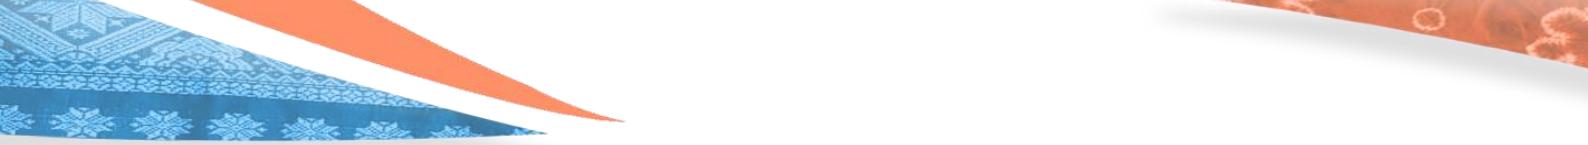

Thank to the God, although we are facing the corona pandemic, the researchers are still be able to produce good research and still have great spirit in finding new technique or methods in many areas. The purpose of the FIRST is basically to provide the researchers and academia to exchange, to discuss the results of their studiy so that it can meet the industrial needs and government regulations, and also to publish the research. Although, this year conference should be held virtually, however, it is hoped that the FIRST 2020 and SNAPTEKMAS 2020 are still able to facilitate researchers from all over the world to meet and to make opportunities to collaborate.

FIRST has been held for four times and organized by State Polytechnic of Sriwijaya. The previous beginning FIRST conference was a National Conference and it was held on October 27, 2015, with the theme: Peningkatan Kualitas SDM melalui Penelitian Teknologi Tepat Guna dalam Menghadapi Ekonomi Asean. On 2016, the FIRST was upgraded in order to enhance the quality of the conference. The first FIRST international conference was held in State Polytechnic of Sriwijaya, on October 18-19, 2016, while the second FIRST international conference was held on October 30-31, 2019 at Horison Ultima Hotel Palembang, and the 3rd FIRST was held on October 9-10, 2019, at Excelton Hotel Palembang, Indonesia.

This 4th FIRST 2020 International Conference has attrated 8 participants, i.e., from Malaysia, Brunei Darussalam, Japan, Taiwan, Thailand, United Kingdom, Hungaria, and Cambodia. While SNAPTEKMAS has become the destination of 6 biggest university in Indonesia.

This year FIRST 2020 and SNAPTEKMAS 2020 conference is held on November 11, 2020, at Beston Hotel. This conference will present:

1. Prof. Chiaki Ogino, from kobe University, an expert in biodiesel field
2. Dr. Wahyu Caesarendra, S.T., M. Eng., from Universiti Brunei Darussalam, an expert in mechanical engineering
3. Prof. Yuliansyah, M.S.A., Ph.D, Akt, CA, from Lampung University, an expert in Accounting
4. Dr. Dodi Reza Alex Noerdin, as Bupati Musi Banyuasin, expert in government policy for technology implementation
5. Assoc. Prof. Dr. Mohammed N Adurazaq, from Management and Science University (MSU), an expert in health technology, and
6. Dr. Muhammad Haikal Satria, IPM, from Jakarta Global University, an expert in health

Finally, I also want to say thank you very much for your participation, I hope that you can enjoy this FIRST 2020 and SNAPTEKMAS 2020.

Wassalamu'alaikum wr wb

FOREWORD FROM DIRECTOR OF STATE POLYTECHNIC OF SRIWIJAYA

Assalamu'alaikum wr wb,

In the name of Allah, the most gracious, the most merciful. First of all, I would like to convey my warm welcome to all of FIRST 2020 and SNAPTEKMAS 2020 keynote speakers and all participant of FIRST 2020 and SNAPTEKMAS 2020. It is my great pleasure to meet and see you in this event.

As we know, the corona pandemic has hit many sectors in the world. Not only the economic one but also the social, and education. As incredibly crucial to the growth and sustainability of innovation and learning within the academic community, some events, such as: academic conferences, seminars, and even lectures themselves, have also been the worst hit by this corona pandemic. A lot of important events has been adversely affected due to region-wide lockdowns.

Therefore, to accommodate the researchers from all over the world and to be consistent in maintaining the continuity and the development of science and technology, the FIRST 2020 and SNAPTEKMAS 2020 are still held in this year although in virtual way. The FIRST 2020 and SNAPTEKMAS 2020 become one of State Polytechnic of Sriwijaya annual event. It is hope that FIRST 2020 and SNAPTEKMAS 2020 become one of the conferences that support the advance of the science and technology.

As our attention on COVID-19 tragedy, in this year, we also make a cooperation with the ITKJ (institut Teknologi Kesehatan Jakarta) or now JGU (Jakarta Global University) that focuses on the health and health technology. Therefore, in this occasion, We also invite special issues research about COVID-19 to participate in FIRST 2020 and SNAPTEKMAS 2020 conferences.

Finally, I also want to say thank you very much for your participation, I hope that you can enjoy this conference and can follow all of the agenda until the closing of this conference.

Wassalamu'alaikum wr wb

KEYNOTE SPEAKER

Prof. Dr. Chiaki Ogino

Chiaki OGINO is the Professor of Department of Chemical Science and Engineering, Graduate School of Engineering, Kobe University, Japan. He received his B.Sc., M.Sc., and Ph.D. in Chemical Engineering at Kobe University, Japan. He has supervised more than 50 over master course students, and 10 over doctor course students in Kobe University. He is the author or co-author of over 230 peer-reviewed journal papers and 40 reviews and book chapters. His research interests are wide and concern: production of biofuels and chemicals from biomass based on synthetic biotechnology by Yeast, Fungi and Actinomycetes, and development of novel drug and gene delivery systems based on nanobiotechnology.

KEYNOTE SPEAKER

Wahyu Caesarendra, PhD

Assistant Professor of General Engineering Faculty of Integrated Technologies, Universiti Brunei Darussalam, Jalan Tungku Link, Gadong BE1410, Brunei Darussalam. Research Interests: Machine Learning, Product Design, Mechatronics, and Smart Manufacturing Ph.D. Mechanical Engineering, University of Wollongong, Australia (2015) M.Eng. (Hons.). Mechanical Design Engineering, Pukyong National University, South Korea (2010) B.Eng. (Hons.) Mechanical Engineering, Diponegoro University, Indonesia (2005). EMPLOYMENT HISTORY: Assistant Professor Faculty of Integrated Technologies, Universiti Brunei Darussalam (08/10/2018 - date). Assistant Professor Department of Mechanical Engineering, Diponegoro University (Jul 2017 – Des 2019). Visiting Asst. Prof. National Taiwan University of Science and Technology (August 2019). Lecturer Department of Mechanical Engineering, Diponegoro University (Dec 2010 – Jun 2017). Postdoctoral Research Fellow School of Mechanical and Aerospace Engineering, Nanyang Technological University (02/02/2017 - 19/09/2018).

KEYNOTE SPEAKER

Prof. Yuliansyah, M.S.A., Ph.D, Akt, CA

Bachelor at Jenderal Soedirman University – Indonesia 1998, Magister Program M.S.A. Meinders School of Business, Oklahoma City, University, United State of America 2006, Doctoral Program Ph.D Division of Business, University of South Australia, Australia 2012. Founder and Chairman of The Udjung Syahrir Foundation and Founder and Chairman of Goodwood Publishing (goodwoodpub.com). Board Committee of Asia Pacific of Management Accounting Association, International Consultant for Qualitative Study (Nvivo Program), The Quality Assurance Team for the Forensic Auditor Professional Certification Institute, Member of Asian Academy of Management, British Accounting and Finance Association Member.

KEYNOTE SPEAKER

Dr. H. Dodi Reza Alex Lic, Econ, MBA

Doctor of Public Administration Program, Faculty of Social & Political Sciences, Padjadjaran University, Bandung, West Java. Fellowship on IDEAS 2.0, Massachusetts Institute of Technology (MIT) Sloan School of Management, Cambridge MA, USA. Master of Business Administration (MBA), Solvay Business School, Université Libre de Bruxelles, Brussels, Belgium. Graduated with the title of Magna Cum Laude. Licencié en Sciences Economiques (Bachelor of Economics), University of Leuven (UCL), Louvain-la-Neuve, Belgium. Graduated with the title 'Grande Distinction (High Honor). Top 2%, A thesis written in French, received the BBL Prize Award. Primary and Secondary Education in Indonesia and Canada. 2017-2022 as Regent of Musi Banyuasin Period, 2014-2016 as Deputy Chairperson of Commission VI DPR RI and Deputy Chairperson of the Golkar Party Faction DPR RI. 2013-2015 as PT. Liga Indonesia Commissioner, Jakarta, Indonesia. In 2009-2014 as Member of the DPR / MPR-RI for the period of 2009-2014.

KEYNOTE SPEAKER

Dr. Muhammad Haikal Satria, IPM

Expertise : Software Engineering, Medical Informatics, Communication Protocol in Healthcare, Software as Medical Devices, QoS Provision in Data Communication. Universiti Teknologi Malaysia Johor, Malaysia Phd (on Electronics engineering) 2007 – 2014. Dissertation : Integration of Multimetric Path Management Into 802.11s For Telemedicine Quality Of Service Provision Universitaet Duisburg Essen Duisburg, Germany MSc (Master of Science) 2006. Thesis : Implementation of a secure RMI connection in a web service monitoring application. University of Indonesia Depok, Indonesia MT (Master of Engineering) 2006 University of Indonesia Depok, Indonesia ST (Bachelor in Engineering) 2003, Thesis : Downlink connectivity on MC-DS-CDMA in Rayleigh dan Rician fading channel.

KEYNOTE SPEAKER

Assoc. Prof. Dr. Mohammed N. Abdulrazaq Alshekhlly

Field of specialisation : Semi-solid Metal Processing, Advanced Materials Joining, Internet of things (IoT), Robotics. Fields of interest : Metal Processing , Metallurgy Friction welding, Metal Matrix Composites, Materials Failure Analysis, Surface engineering/ Wear of materials, Biomedical sciences. Doctor of Philosophy (Ph.D) In Mechanical and Materials Engineering. Department of Mechanical and Materials Engineering, National University Of Malaysia (UKM) (2011–2015). Master In Mechanical Engineering, Department of Mechanical and Materials Engineering, National University Of Malaysia (UKM) (2009 – 2010). B.Sc. In Mechanical/Production Engineering. Department of production & Metallurgy Engineering, University of Technology-Baghdad (2002 – 2006).

ABSTRACT

Biomass is a plant material which is quite abundant in Indonesia. Utilization is also currently undergoing development. One of the uses for biomass is conversion to biogas. Biogas is a renewable energy source that can be used as a substitute for fossil energy. Biogas can be produced by utilizing organic materials that are no longer used through anaerobic digestion processes. In the process of producing biogas as an environmentally friendly fuel, it is necessary to first wash the biogas. The CO₂ and H₂S content in biogas reduces the efficiency of the combustion process and causes corrosion of machining components. Biogas purification by absorption is a way to reduce levels of CO₂ and H₂S contained, so that the biogas produced can be used as fuel. In this study, absorption using a packed bed scrubber and monoethanolamine solution and varying the biogas flow rate. The results of biogas purification using 7M monoethanolamine solution decreased CO₂ and H₂S levels and increased methane gas production up to 87.6% with a biogas flow rate of 5 L/minute.

1. INTRODUCTION

Fossil fuels such as oil and coal is the main energy source in Indonesia, will be but these energy sources have devastating effects on the environment, including air pollution, greenhouse gas emissions and global warming. Another problem is the high price of fossil fuels, the increase in the number of imports of petroleum due to national fuel consumption. Petroleum energy ranks first in the composition of the national energy mix, which is around 48% of the total national energy mix and the expounded petroleum resources are predicted to run out in about 12.26 years [1].

To overcome this, the Indonesian government seeks to increase the use of non-fossil energy in the form of new and renewable energy (RE) through Government Regulation (PP) No. 79/2014 concerning the National Energy Policy (KEN), where the target of RE utilization in 2025 increases to 23% while energy utilization from petroleum decreases to 25% [1].

Biomass is biological material derived from plants and animals and consists of large amounts of carbon and other elements in smaller amounts such as nitrogen,

oxygen, hydrogen, alkaline earth, and heavy metals. This type of energy is included in a renewable energy source because trees and other living things can reproduce and grow back. The raw material for making biomass which is always available is an inexhaustible and renewable source of energy. Many products can be generated from biomass, for example biomass can be used as a power source, a source of biofuel and others.

Renewable energy sources are environmentally friendly energy sources that do not pollute the environment and do not contribute to climate change and global warming. Biogas is an alternative energy which is currently being developed. Besides being cheap, biogas is also environmentally friendly. Making biogas is simple, namely by inserting a substrate in the form of cow dung or organic waste into a tightly closed digester container, in some time it will produce gas as an energy source [2].

The biogas produced from the organic waste fermentation process does not contain 100% flammable gas. Products biogas consists of methane (CH₄) 55-65%, carbon dioxide (CO₂) 35-45%, nitrogen (N₂) 0-0.3%, hydrogen (H₂) 1-5%, hydrogen sulfide (H₂S) 0-3%, oxygen (O₂) 0.1-0.5%, and water vapor.

All the elements that play a role in determining the quality of biogas, namely methane gas (CH_4) and carbon dioxide (CO_2). [3-5].

In order to produce optimal biogas, there are several factors that must be maintained in the process of biogas formation, namely the pH factor, the optimal pH value is at 6.8 - 7.4 [6]. The optimum temperature biogas formation at 35°C [7] and C/N ratio, is the relationship between the amount of carbon and nitrogen. For anaerobic digesters, the C/N value is between 20-30. If the C/N is too high, the biogas production will be low, if the C/N is too low, nitrogen will accumulate to form ammonia [8].

The purity of the CO_2 and H_2S content in biogas is important because it affects the resulting calorific value and the lifespan of the biogas-using equipment. The CH_4 content in biogas can be increased 75-98% by removing the CO_2 and H_2S content [9]. In this case the impurity which affects the heating value is carbon dioxide (CO_2). The presence of CO_2 in CH_4 gas is very undesirable, this is because carbon dioxide is an inhibitor of the rate of chemical combustion reactions in machinery [10]. The lower the level of CO_2 in CH_4 the higher the heating value of CH_4 , indicated by the yellowish red color in the resulting flame [11]. CO_2 reduces the rate of propagation of the combustion flame because the CO_2 molecule inhibits the collision reaction between the hydrocarbon refrigerant molecules and the air molecules [12]. The CO_2 content can also reduce the thermal efficiency of diesel engines. The optimal methane content of biogas for engine fuel is more than 90% [13].

In the production process of making biogas, the resulting biogas product must contain H_2S ranging from 100-10000 ppm, the H_2S content depends on the type of biomass and organics contained [14]. H_2S has been identified as a compound that causes problems in its use in machining because H_2S causes mechanical components to corrode [15]. The use of biogas which contains H_2S produces sulfur and sulfuric acid which are corrosive to various types of metals. H_2S content of 200 ppm if inhaled by humans for 30 minutes can cause death. The maximum permit for H_2S for safety and health standards is 20 ppm [16]. When the H_2S contained in this biogas burns, the H_2S will turn into sulfur oxide which will cause corrosion to metal components and make engine lubricant oil acidic. To reduce the damage caused by H_2S the compounds H_2S should be eliminated or reduced abortion up to the limit of tolerance [17, 18].

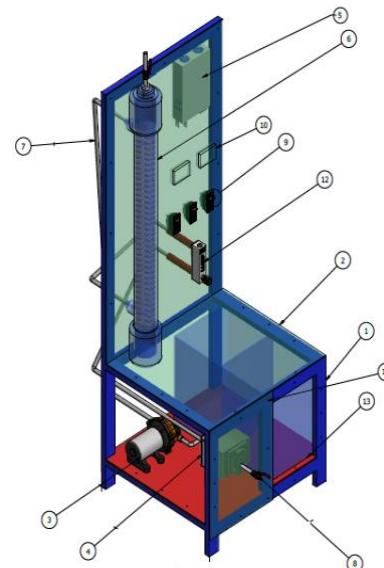

To increase the benefits of biogas as *renewable energy*, it is necessary to carry out the methane refining stage. Biogas purification techniques can be performed using absorption, namely the separation of a specific gas from a mixture of gases by way of transfer of mass into a liquid solvent that has a different selectivity of

gas which would remove. Various kinds of biogas purification methods include physical absorption, chemical absorption, membrane separation absorption, cryogenic and chemical conversion into other compounds [19, 20]. It is also available to capture CO_2 with various solvents such as monoethanolamine, ammonia, tetrahydrofuran, and tetra-n-butyl ammonium bromide [21, 22].

In this study the biogas from cow manure produced by the digester with a volume of 500 liters. Biogas raw materials consist of cow dung and water in ratio of 1:2 and its left to rest during fermentation process. Biogas analyzed the results composition by interval 5 days, biogas which is day 5, 10, 15, 20, 25, 30, and 35 to know the optimum composition of biogas, then once obtained optimum conditions biogas. The biogas digester used in this study can be seen in Figure 1.

Purification of the biogas with monoethanolamine (MEA) 7M, the flow rate of MEA solution 1.5 L/minute with variations in the biogas flow rate of 5, 10, 15, 20, 25 and 30 L/minute. The equipment used in this study can be seen in Figure 2.

The results of biogas production during the fermentation process are analyzed at interval every 5 days using the Shimadzu Gas Chromatography to determine the composition of biogas with parameters such as CH₄, CO₂, O₂, and H₂S.

3. RESULTS AND DISCUSSION

3.1 Biogas composition analysis

The fermented biogas product at intervals of 5 days are collected in a biogas bag before purification by using of a MEA. Biogas fermentation occurs due to the help of microorganisms that function as decomposers of raw materials, fermentation process occurs for 35 days with maintained temperature and pH. Biogas product can be seen in Figure 3.

3.2 Effect of biogas flow rate on methane gas content

When purifying the biogas produced with 7M MEA solution, the biogas flow rate was varied to see its effect on the amount of methane gas produced. The results of measurement and analysis of biogas purity based on the biogas flow rate can be seen in Figure 5.

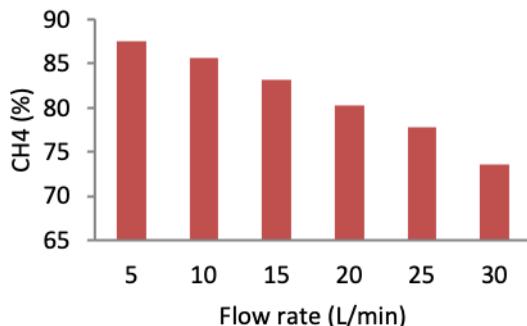

Figure 5. Effect of biogas flow rate on methane gas production

It can be seen in Figure 4 that the higher the flow rate will cause the absorption of CH₄ in the biogas to decrease, this is because the biogas flow rate causes the absorption between the MEA solution in the biogas to

be less than optimal. The results of biogas analysis after purification showed very significant at a biogas flow rate 5 L/min with concentration of 7M MEA able to reach 87.6% methane compared with a biogas flow rate of 10 L/min to 30 L/min.

3.2 Effect of Biogas Flow rate CO₂ Production

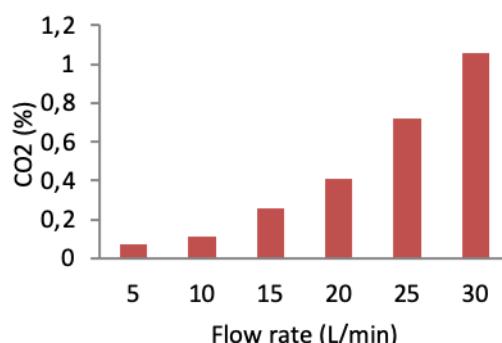

Figure 6. Effect of biogas flow rate on CO₂ gas production

According to Figure 6 that the higher flow rate will cause absorption of CO₂ in the biogas decreases this is caused because the flow rate of biogas cause absorption between the MEA solution becomes less optimal biogas. Increasing the flow rate of biogas makes the CO₂ content increases. From this research, it was found that the greater the biogas flow rate, the CO₂ production will also increase.

3.3 Effect of Biogas Flow Rate to H₂S production

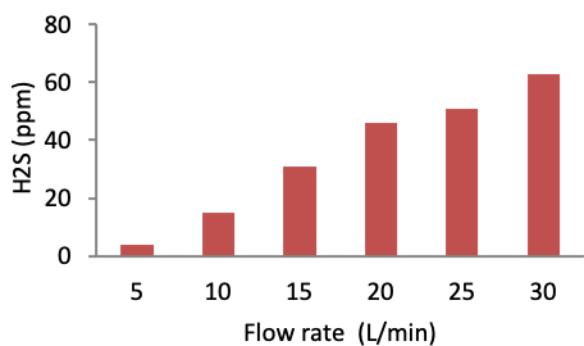

Figure 7. Effect of biogas flow rate on H₂S gas production

From the Figure 7, increasing the flow rate biogas make H₂S content increase. Concentration H₂S in biogas has increased from 4 to 63 ppm. From this research proved that the lower flow rate of biogas can reduces H₂S.

4. CONCLUSION

Biogas produced from cow manure can be obtained after 25 days with methane gas content reached 68.18% before purification. After being purified with 7M

monoethanolamine (MEA) solution, the amount of methane gas increased to 87.6% at a biogas flow rate of 5 L/minute. In this condition the H₂S and CO₂ levels decrease while the O₂ levels increase.
