FOREWORD FROM GENERAL CHAIR 4th FIRST 2020 INTERNATIONAL CONFERENCE

Assalamu'alaikum wr wb,

Thank to Allah SWT, the most gracious, the most merciful, and may prayers and peace be upon our prophet, Muhammad SAW and upon his companions

First of all, I also would like to say thank you very much for choosing FIRST 2020 and SNAPTEKMAS 2020. I also would like to convey my warm welcome to all FIRST 2020 and SNAPTEKMAS 2020 keynote speakers and all participant.

Thank to the God, although we are facing the corona pandemic, the researchers are still be able to produce good research and still have great spirit in finding new technique or methods in many areas. The purpose of the FIRST is basically to provide the researchers and academia to exchange, to discuss the results of their study so that it can meet the industrial needs and government regulations, and also to publish the research. Although, this year conference should be held virtually, however, it is hoped that the FIRST 2020 and SNAPTEKMAS 2020 are still able to facilitate researchers from all over the world to meet and to make opportunities to collaborate.

FIRST has been held for four times and organized by State Polytechnic of Sriwijaya. The previous beginning FIRST conference was a National Conference and it was held on October 27, 2015, with the theme: Peningkatan Kualitas SDM melalui Penelitian Teknologi Tepat Guna dalam Menghadapi Ekonomi Asean. On 2016, the FIRST was upgraded in order to enhance the quality of the conference. The first FIRST international conference was held in State Polytechnic of Sriwijaya, on October 18-19, 2016, while the second FIRST international conference was held on October 30-31, 2019 at Horison Ultima Hotel Palembang, and the 3rd FIRST was held on October 9-10, 2019, at Excelton Hotel Palembang, Indonesia.

This 4th FIRST 2020 International Conference has attracted 8 participants, i.e., from Malaysia, Brunei Darussalam, Japan, Taiwan, Thailand, United Kingdom, Hungary, and Cambodia. While SNAPTEKMAS has become the destination of 6 biggest university in Indonesia.

This year FIRST 2020 and SNAPTEKMAS 2020 conference is held on November 11, 2020, at Beston Hotel. This conference will present:

1. Prof. Chiaki Ogino, from Kobe University, an expert in biodiesel field
2. Dr. Wahyu Caesarendra, S.T., M. Eng., from Universiti Brunei Darussalam, an expert in mechanical engineering
3. Prof. Yuliansyah, M.S.A., Ph.D, Akt, CA, from Lampung University, an expert in Accounting
4. Dr. Dodi Reza Alex Noerdin, as Bupati Musi Banyuasin, expert in government policy for technology implementation
5. Assoc. Prof. Dr. Mohammed N Adurazaq, from Management and Science University (MSU), an expert in health technology, and
6. Dr. Muhammad Haikal Satria, IPM, from Jakarta Global University, an expert in health

Finally, I also want to say thank you very much for your participation, I hope that you can enjoy this FIRST 2020 and SNAPTEKMAS 2020.

Wassalamu'alaikum wr wb

FOREWORD FROM DIRECTOR OF STATE POLYTECHNIC OF SRIWIJAYA

Assalamu'alaikum wr wb,

In the name of Allah, the most gracious, the most merciful. First of all, I would like to convey my warm welcome to all of FIRST 2020 and SNAPTEKMAS 2020 keynote speakers and all participant of FIRST 2020 and SNAPTEKMAS 2020. It is my great pleasure to meet and see you in this event.

As we know, the corona pandemic has hit many sectors in the world. Not only the economic one but also the social, and education. As incredibly crucial to the growth and sustainability of innovation and learning within the academic community, some events, such as: academic conferences, seminars, and even lectures themselves, have also been the worst hit by this corona pandemic. A lot of important events has been adversely affected due to region-wide lockdowns.

Therefore, to accommodate the researchers from all over the world and to be consistent in maintaining the continuity and the development of science and technology, the FIRST 2020 and SNAPTEKMAS 2020 are still held in this year although in virtual way. The FIRST 2020 and SNAPTEKMAS 2020 become one of State Polytechnic of Sriwijaya annual event. It is hope that FIRST 2020 and SNAPTEKMAS 2020 become one of the conferences that support the advance of the science and technology.

As our attention on COVID-19 tragedy, in this year, we also make a cooperation with the ITKJ (institut Teknologi Kesehatan Jakarta) or now JGU (Jakarta Global University) that focuses on the health and health technology. Therefore, in this occasion, We also invite special issues research about COVID-19 to participate in FIRST 2020 and SNAPTEKMAS 2020 conferences.

Finally, I also want to say thank you very much for your participation, I hope that you can enjoy this conference and can follow all of the agenda until the closing of this conference.

Wassalamu'alaikum wr wb

KEYNOTE SPEAKER

Prof. Dr. Chiaki Ogino

Chiaki OGINO is the Professor of Department of Chemical Science and Engineering, Graduate School of Engineering, Kobe University, Japan. He received his B.Sc., M.Sc., and Ph.D. in Chemical Engineering at Kobe University, Japan. He has supervised more than 50 over master course students, and 10 over doctor course students in Kobe University. He is the author or co-author of over 230 peer-reviewed journal papers and 40 reviews and book chapters. His research interests are wide and concern: production of biofuels and chemicals from biomass based on synthetic biotechnology by Yeast, Fungi and Actinomycetes, and development of novel drug and gene delivery systems based on nanobiotechnology.

KEYNOTE SPEAKER

Wahyu Caesarendra, PhD

Assistant Professor of General Engineering Faculty of Integrated Technologies, Universiti Brunei Darussalam, Jalan Tungku Link, Gadong BE1410, Brunei Darussalam. Research Interests: Machine Learning, Product Design, Mechatronics, and Smart Manufacturing Ph.D. Mechanical Engineering, University of Wollongong, Australia (2015) M.Eng. (Hons.). Mechanical Design Engineering, Pukyong National University, South Korea (2010) B.Eng. (Hons.) Mechanical Engineering, Diponegoro University, Indonesia (2005). EMPLOYMENT HISTORY: Assistant Professor Faculty of Integrated Technologies, Universiti Brunei Darussalam (08/10/2018 - date). Assistant Professor Department of Mechanical Engineering, Diponegoro University (Jul 2017 – Des 2019). Visiting Asst. Prof. National Taiwan University of Science and Technology (August 2019). Lecturer Department of Mechanical Engineering, Diponegoro University (Dec 2010 – Jun 2017). Postdoctoral Research Fellow School of Mechanical and Aerospace Engineering, Nanyang Technological University (02/02/2017 - 19/09/2018).

KEYNOTE SPEAKER

Prof. Yuliansyah, M.S.A., Ph.D, Akt, CA

Bachelor at Jenderal Soedirman University – Indonesia 1998, Magister Program M.S.A. Meinders School of Business, Oklahoma City, University, United State of America 2006, Doctoral Program Ph.D Division of Business, University of South Australia, Australia 2012. Founder and Chairman of The Ujang Syahrir Foundation and Founder and Chairman of Goodwood Publishing (goodwoodpub.com). Board Committee of Asia Pacific of Management Accounting Association, International Consultant for Qualitative Study (Nvivo Program), The Quality Assurance Team for the Forensic Auditor Professional Certification Institute, Member of Asian Academy of Management, British Accounting and Finance Association Member.

KEYNOTE SPEAKER

Dr. H. Dodi Reza Alex Lic, Econ, MBA

Doctor of Public Administration Program, Faculty of Social & Political Sciences, Padjadjaran University, Bandung, West Java. Fellowship on IDEAS 2.0, Massachusetts Institute of Technology (MIT) Sloan School of Management, Cambridge MA, USA. Master of Business Administration (MBA), Solvay Business School, Université Libre de Bruxelles, Brussels, Belgium. Graduated with the title of Magna Cum Laude. Licencié en Sciences Economiques (Bachelor of Economics), University of Leuven (UCL), Louvain-la-Neuve, Belgium. Graduated with the title 'Grande Distinction (High Honor). Top 2%, A thesis written in French, received the BBL Prize Award. Primary and Secondary Education in Indonesia and Canada. 2017-2022 as Regent of Musi Banyuasin Period, 2014-2016 as Deputy Chairperson of Commission VI DPR RI and Deputy Chairperson of the Golkar Party Faction DPR RI. 2013-2015 as PT. Liga Indonesia Commissioner, Jakarta, Indonesia. In 2009-2014 as Member of the DPR / MPR-RI for the period of 2009-2014.

KEYNOTE SPEAKER

Dr. Muhammad Haikal Satria, IPM

Expertise : Software Engineering, Medical Informatics, Communication Protocol in Healthcare, Software as Medical Devices, QoS Provision in Data Communication. Universiti Teknologi Malaysia Johor, Malaysia Phd (on Electronics engineering) 2007 – 2014. Dissertation : Integration of Multimetric Path Management Into 802.11s For Telemedicine Quality Of Service Provision Universitaet Duisburg Essen Duisburg, Germany MSc (Master of Science) 2006. Thesis : Implementation of a secure RMI connection in a web service monitoring application. University of Indonesia Depok, Indonesia MT (Master of Engineering) 2006 University of Indonesia Depok, Indonesia ST (Bachelor in Engineering) 2003, Thesis : Downlink connectivity on MC-DS-CDMA in Rayleigh dan Rician fading channel.

KEYNOTE SPEAKER

Assoc. Prof. Dr. Mohammed N. Abdulrazaq Alshekhly

Field of specialisation : Semi-solid Metal Processing, Advanced Materials Joining, Internet of things (IoT), Robotics. Fields of interest : Metal Processing , Metallurgy Friction welding, Metal Matrix Composites, Materials Failure Analysis, Surface engineering/ Wear of materials, Biomedical sciences. Doctor of Philosophy (Ph.D) In Mechanical and Materials Engineering. Department of Mechanical and Materials Engineering, National University Of Malaysia (UKM) (2011–2015). Master In Mechanical Engineering, Department of Mechanical and Materials Engineering, National University Of Malaysia (UKM) (2009 – 2010). B.Sc. In Mechanical/Production Engineering. Department of production & Metallurgy Engineering, University of Technology–Baghdad (2002 – 2006).

ABSTRACT

The standalone solar power plant system uses batteries as a storage component of electrical energy generated. A charging condition that exceeds the capacity more than 100% and the battery discharging condition exceeds the discharge depth value (depth of discharge 80% or state of charge 20%) of the battery capacity can shorten the service life. The use of Siemens LOGO! 8.FSA (LOGO 0BA8) smart relay can adjust the condition of the discharge of depth (DoD) and overcharging of a battery so that it can be monitored. The capabilities of a smart relay can be made an indicator, alarm, or energize the contactor so that it can prevent or reduce the discharge and overcharging that occurs in the battery which makes the battery life longer.

1. INTRODUCTION

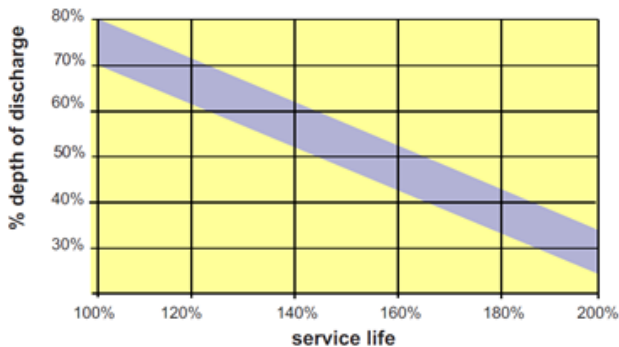

A standalone Power System is a system that supplies electricity to users and is not connected to the power distribution system from the power supply authority [1-3]. In a standalone solar power generation system, the type of battery commonly used is Valve Regulated Lead Acid (VRLA). In addition to a reasonably affordable price, battery life can reach 10 years, depending on the technology and quality of the materials used, load levels, and various other factors [4, 5]. Apart from being maintenance-free, because this type of battery has a valve for gas exchange, the temperature inside the battery will be maintained, and the battery's lifetime will be maximized [6-8].

Lead acid battery failures can include unavoidable natural failures such as expansion and corrosion of the positive plate, reduced capacity due to physical changes. Other causes of damage are due to the influence of temperature, overcharging, undercharging, DC ripple [9, 10], and the discharge depth level where the cycle test shows significant lead sulfate (PbSO₄) formation on the negative and positive electrodes. 80% of DoD can reduce the life cycle. Sulfate formation was observed to decrease at low DoD [11-14].

VRLA batteries are not recommended to drain more than 80% of their capacity. The maximum capacity are 80% DoD 1200 cycles, 50% DoD 2500 cycles and 20% DoD reaches 5000 cycles [15]. In Figure 1, the higher the depth of discharge of a battery, the cycle time or service life will decrease. It is necessary to limit the DoD value to around 80% to maintain longer battery life.

The solar charge controller controls battery charging in solar power plants. The selection of the MPPT type controller is based on an efficiency level of up to 30% and can force solar panels to operate close to the maximum voltage [16-18]. Battery charging is getting better and faster with MPPT (Maximum Power Point Tracking). Generally, MPPT controllers are equipped with battery voltage measurements. There is a voltage measurement provided that can be accessed via the RS 485 serial port or the TCP/IP Modbus port on the latest technology. The advantages of the Modbus protocol that will be used in this study are that it is openly published and royalty-free, is relatively easy to apply to industrial networks, and uses raw bits or words of data without imposing many restrictions and limitations on developers [19].

Various attempts have been made by many researchers to create a battery monitoring system, including the Arduino-based Smart Battery Monitor DS2438. In this study, discussed the monitoring of the VRLA battery discharge depth that utilizes the voltage value data on the MPPT type solar charge controller with a TCP/IP Modbus output. Data in the form of voltage is stored in the form of registers that can be read using the MPPT Tristar TS-MPPT-60 controller and processed using a smart relay from Siemens, namely (LOGO! 8.FS4). Smart relays have the advantage of having a display to display program output in the form

of information from the monitored battery.

2. RESEARCH METHODS

Block diagram of the VRLA battery monitoring system on the standalone PV system information is stored real time in the Tristar TS-MPPT-60 solar charge controller and read by Siemens LOGO! 8.FS4 is first programmed via the Siemens LOGO software! Soft Comport version 8.2.1, as shown in Figure 2. The output of the Siemens (LOGO! 8.FS4) is an indication of the depth of charge, which is the battery rating with a display of numbers, text, and bar graphs on the screen Siemens (LOGO! 8.FS4) which is different in each condition, including the indicator light on the panel box. Besides, other outputs to support monitoring conditions are added with an alarm in the form of a sound when the depth of the charger shows a value of 25% State of Charge (SoC) or 75% Depth of Discharge (DoD). There is an output that will function the contactor as a power supply breaker from the solar panel with a timer setting when charging has reached the highest voltage for charging according to the instructions from the battery manufacturer to avoid the overcharge. If there are many types of loads, the loading can be adjusted based on priority, where the load with the highest priority, according to the user, is maintained when the discharge has reached the lowest value starting from 25% to protect the battery from damage.

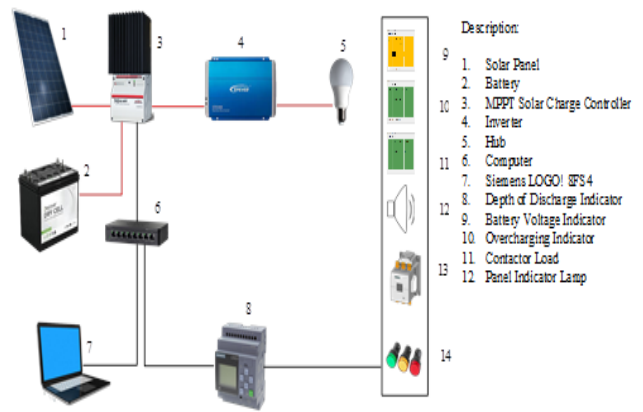

Figure 2 VRLA Battery Monitoring Block Diagram

In previous research, it was found that the relationship between Open Circuit Voltage (OCV) and the State of Charge was a linear. By using a 1400mAh capacity battery, the OCV of the battery when fully charged is 13.18 volts, while 11.8 volts when the battery is completely discharged, as shown in Figure 3 [21, 22].

Figure 3 Battery SoC Against OCV [14]

Depth of discharge with a value of more than 80% on a standalone PV system battery can occur during the rainy season. Increase of DoD happens because the rate of battery charging to discharge is quite different due to the influence of the weather. It takes longer time for charging to reach 100% capacity compared to discharging with an SoC value of 20% because the power generated by the solar panels is low due to low sun intensity as in Figure 4.

3. RESULTS AND DISCUSSION

Battery voltage data is required for monitoring the observed battery condition. In the MPPT Tristar TS-MPPT-60 solar charge controller, there are current, voltage and temperature sensors that are stored as registers that support the Modbus function, namely read holding registers 03 (0x03) and read input registers 04 (0x04). Three holding registers are required to be read by the Siemens (LOGO! 8.FS4) smart relay.

The first is the holding register with the protocol data address 0x0000 and logical address 1 variable name V_PU hi. The second is holding registers with data protocol address 0x0001 and logical address 2 variable name V_PU lo. The third is holding register with a data protocol address 0x0018 and a logical address 25 variable names adc_vb_f_med. The register reads in the (LOGO! 8.FS4) smart relay is a decimal number. The registers are processed to produce a voltage value with the equation:

$$V_PU\ hi + (V_PU\ lo / 2^{16}); \tag{1}$$

Where in this study, it was observed and tested at the voltage numbers up to 64 V dc, the two register values were fixed, namely 180 and 0.

$$V\ battery = (adc_vb_f_med \times 180) / 32768 \tag{2}$$

The value of the highest register and the lowest register of the battery is required to get % SoC. In this study, the Shoto 6 FMX 150 B brand battery was used. By using the Epever solar station monitor software (V1.95) and the eLOG Tools (V1.1) software as a comparison to the Siemens (LOG! 8.FS4) obtained a graph, as shown in Figure 5. As for % SoC processed by smart relay using the equation:

$$\% \text{ SoC} = (\text{Reg } 25 - \text{Reg Min}) / (\text{Reg Max} - \text{Reg Min}) \times 100 \tag{3}$$

Based on equation (1) and equation (2), using Siemens (LOGO! 8.FS4) smart relay, the graph in Figure 5 is obtained which is almost identical to the comparator (Ep ever) using the MPPT Ep ever Solar Charge Controller software.

Figure 5 shows the relationship between %SoC and battery voltage is linear. The two graphs are almost identical, which shows that using a smart relay (LOGO! 8.FS4) battery monitoring can be done. An indication of the battery condition can be shown on the output terminal of (Logo! 8.FS4) smart relay and connected to contactors, alarms, and indication lights as safety when the battery condition has reached 20% SoC (80% DoD), as shown in Figure 6.

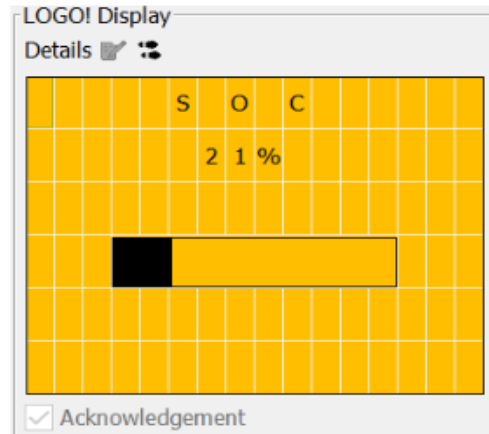

Figure 6 Display of 21% SoC (79% DoD)

Charging will stop when the battery voltage reaches a high value of 100% SoC (14 volts). The full capacity of the battery causes the smart relay to display an indication as in Figure 7 and the smart relay output will energize the contactor to turn off the supply of electrical energy from the solar panel with a time that can be delayed (timer).

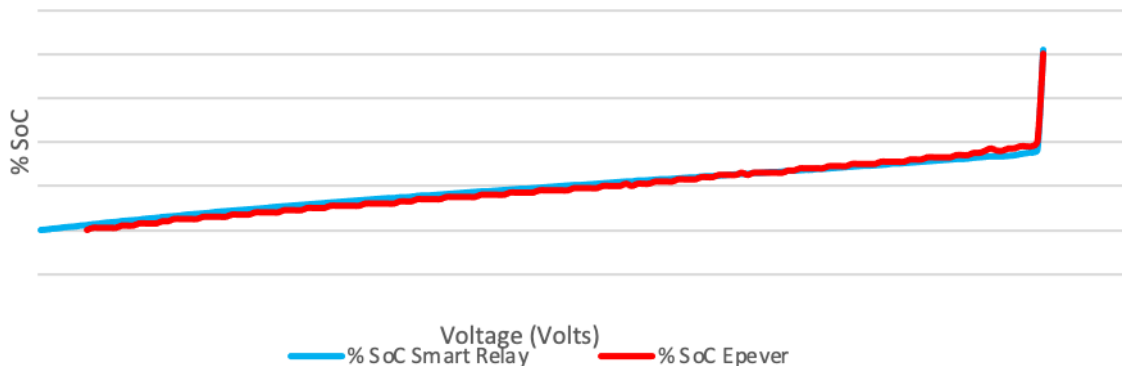

Figure 5 Graph of Smart Relay and Ep ever Battery Discharge Rate

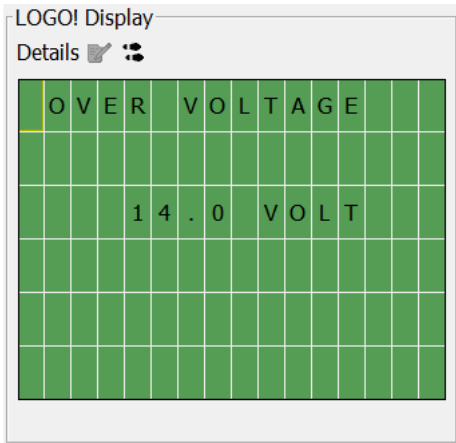

Figure 7 Display of 100% SoC

The results of the SoC and voltage measurements using (LOGO! 8FS4) are almost close to the comparison with a value difference ranging from 0.1 to 0.3 volts. In Figure 5, there is a sharp decrease from 100% to 60% because the Epever software has been programmed for 0% and 100% battery capacity. By using a smart relay, the value of 0% battery capacity and 100% capacity can be input according to factory specifications through the input of the lowest voltage value and highest voltage input via software as shown in Figure 8. Thus, the voltage value and SoC (DoD) is more accurate and the battery condition can be displayed as in Figure 6 and Figure 7 as well as the output of the smart relay which functions as an alarm and battery saver. For the voltage value, there is a difference between the prototype and the comparison of the average measurement for% SoC (DoD) of 36 samples. The average difference is 0.12 volts, which means the comparison of the voltage readings contained in the solar charge controller Epever is compared to the results of the program process on the smart relay (prototype) using equation (1) of the Tristar TS-MPPT-60 solar charge controller is quite good.

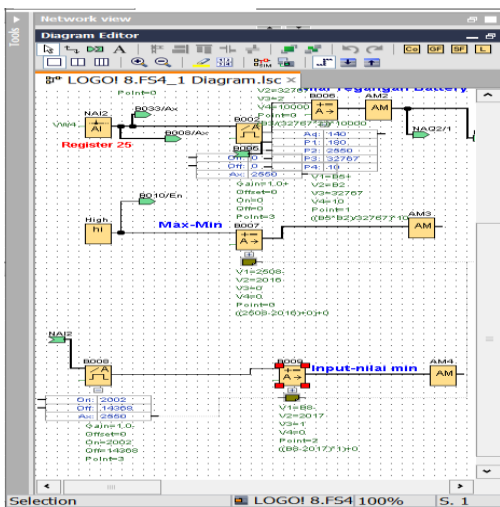

Figure 8 Maximum and Minimum Battery Value Input Program LOGO! 8FS4

The use of smart relays (LOGO! 8FS4) as battery monitoring can function both as an alarm system and as a battery protector. With block-based programming of mathematical operation diagrams for various monitoring purposes, it can be done such as Monitoring Dept of Discharge and safety on VRLA batteries that have been carried out. Besides the various conveniences, there are limitations to the calculation where the highest number that can be processed by the smart relay is limited to the value 32768. If in programming, there is processing that exceeds this value, it can be done with manipulation tips and tricks by division. Another limitation is that it cannot process longer programs than that provided by the Siemens smart relay (LOGO! 8FS4).

4. CONCLUSION

The use of smart relays (LOGO! 8FS4) as battery monitoring can function both as an alarm system and as a battery protector. With block-based programming of mathematical operation diagrams for various monitoring purposes, it can be done such as Monitoring Dept of Discharge and safety on VRLA batteries that have been carried out.
