

CHAPTER V

CONCLUSIONS AND SUGGESTION

5.1. Conclusion

Based on the explanation on the previous chapter, the writer concludes that there are five steps in writing a good video script. The steps were taken from Plomp (1997) and stages written by Friedman (2006). The first step is preliminary investigation, this step followed the stages by Friedman. They are background research and investigation. The second step is Designing, this step followed the stages by Friedman . They are concept and treatment. The third step is Realization/construction. This step followed the stages by Friedman is the first draft. The fourth step is testing, evaluation, and revision, which involves the revision of the script by some experts. This step followed the stages of Friedman's revision. The writer did limited testing to ensure the product's development. There were three aspects tasted by three experts in limited testing. The aspects were about the content of the video script in Indonesian script, Indonesian script for subtitles in the video, and also grammatical errors, diction, and coherence in the English script. Then, the writer revised the video script. After that, the writer did wider testing. The writer asked for comments and suggestions from the two experts. The first expert checked the content of the video, and the second expert checked the grammatical errors in the script. The last step is final product testing, connected with the final draft. This is the last stage of research and development modification steps. It consists of implementation. After revising the first draft into the final draft by some experts, The writer implemented the critiques and advice into the final draft of the video script.

There were some advantages and disadvantages to the steps. The advantages, such as the steps are relevant, so the writer easily implemented the steps that will be done. The steps are easily enforced because when the writer writes the script, the

writer is more understood in developing the script. The writer also found disadvantages when implementing the steps. The step consisted of six stages, so the writer took a long time and it was difficult to raise the idea of the paragraph in script development.

5.2. Suggestion

In the future, while writing the script or subtitle video, they should pay more attention to the elements in the script, as well as the steps in making the script, so that the message sent by the video and script is understood by the viewers. Furthermore, researchers can improve this research by studying new sources, references, and research preparations.
