

NETWORK AUTHENTICATION AND ACCESS CONTROL USING APPS

By

MUHAMMAD SATRIA AGUSTOMIKO

**Project Submitted in Partial Fulfillment of the Requirements for the
Degree of Bachelor of Information and Communication Technology
(Hons.) in the Faculty of Information Sciences and Engineering**

May 2023

PENGISYIHKARAN

(*Declaration*)

Saya/Kami,

I/We,

MUHAMMAD SATRIA AGUSTOMIKO

calon bagi ijazah

candidate for the degree of

BACHELOR OF INFORMATION AND COMMUNICATION

TECHNOLOGY(Hons.), Management & Science University mengakui bahawa :

Management & Science University certify that :

- i. Tesis saya/kami telah dijalankan, digubal dan ditulis sendiri di bawah penyeliaan :
My/Our thesis was personally developed, conducted and written by us under the supervision of
ASSOC PROF. TS DR ASIF IQBAL
- ii. Data saya/kami adalah data asal dan saya/kami sendiri mengumpul dan menganalisisnya; dan
My/Our data are original and personally collected and analysed and
- iii. Saya/Kami akan sentiasa mematuhi syarat, polisi dan peraturan MSU mengenai penulisan tesis, termasuk undang-undang Hakcipta dan Paten Malaysia.
I/We shall at all times be governed by the conditions, policies and regulations of the MSU on thesis writing, including the copyright and Patent laws of Malaysia.

Jika saya/kami didapati melanggar perkara-perkara di atas, saya/kami dengan rela menepikan hak penganugerahan Ijazah saya/kami dan tertakluk kepada syarat dan peraturan disiplin Management & Science University.

In the event that my/our thesis be found to violate the conditions mentioned above, I/we voluntarily waive the right of conferment of my/our degree and be subjected to the disciplinary rules and regulations of Management & Science University.

Faculty: Information Sciences and Engineering

Most websites or other forms of applications only rely on usernames and passwords to protect their data. If the username and password can be stolen by other parties, then they can easily steal our data. Security is the most important part of protecting our data. In maintaining security, we need layered levels so that our data can be stored properly. One Time Password (OTP) is a way to secure data or accounts from attack by unknown people. Using this short lifetime, OTP provides a dynamic, up-to-date code that can be used to confirm that the person using the user's credentials is actually the legitimate one. Not someone who obtained stolen credentials. The next level of security is access control. Admin grants access permissions only to users he approves. In this application the admin will choose who can access the data on the website so that data leakage does not occur and ensures data security. Users also cannot access their data carelessly because some of the data on the website is confidential. This provides strict safeguards so that the website can be maintained safely.

ABSTRAK (Versi Bahasa Malaysia)

Abstrak projek dibentangkan kepada Senat Universiti Pengurusan & Sains sebagai memenuhi sebahagian daripada keperluan untuk ijazah Sarjana Muda Teknologi Maklumat dan Komunikasi (Kepujian).

NETWORK AUTHENTICATION AND ACCESS CONTROL USING APPS

Fakulti: Sains Maklumat dan Kejuruteraan

Kebanyakan tapak web atau bentuk aplikasi lain hanya bergantung pada nama pengguna dan kata laluan untuk melindungi data mereka. Jika nama pengguna dan kata laluan boleh dicuri oleh pihak lain, maka mereka boleh mencuri data kami dengan mudah. Keselamatan adalah bahagian paling penting dalam melindungi data kami. Dalam mengekalkan keselamatan, kami memerlukan tahap berlapis supaya data kami dapat disimpan dengan betul. Kata Laluan Satu Kali (OTP) ialah satu cara untuk melindungi data atau akaun daripada serangan orang yang tidak dikenali. Menggunakan seumur hidup yang singkat ini, OTP menyediakan kod dinamik dan terkini yang boleh digunakan untuk mengesahkan bahawa orang yang menggunakan bukti kelayakan pengguna sebenarnya adalah yang sah. Bukan seseorang yang memperoleh kelayakan yang dicuri. Tahap keselamatan seterusnya ialah kawalan akses. Pentadbir memberikan kebenaran akses hanya kepada pengguna yang diluluskannya. Dalam aplikasi ini admin akan memilih siapa yang boleh mengakses data di laman web supaya kebocoran data tidak

berlaku dan menjamin keselamatan data. Pengguna juga tidak boleh mengakses data mereka secara sembarangan kerana beberapa data di laman web adalah sulit. Ini menyediakan perlindungan yang ketat supaya tapak web dapat diselenggara dengan selamat.

ACKNOWLEDGEMENT

First, I would like to thank Allah, the Almighty, for His grace, strength, and loyalty for my academic career so that I can reach this point. With me having completed my final assignment entitled "Network Authentication and Access Control Using Apps". Thanks to him, I was able to complete my assignment properly and successfully.

Apart from the effort I put into making this report there was a lot of support from people around me who contributed to the completion of my report. Thank you to those who have given encouragement and a lot of motivation to keep me excited.

I would also like to thank my supervisor, Assoc Prof. Ts Dr Asif Iqbal, who has guided me in making a report. Thanks to his knowledge and guidance, I was able to complete this report properly. Every time I meet with him, he always provides motivation and knowledge that is very useful for me to continue learning and not be easily satisfied in seeking knowledge.

Finally, I would like to thank and warm greetings to my parents who always pray for me, always give me encouragement, and of course give me direction so that I can provide the best for my family and also be able to provide the best for my family.
