

PROGRAM SIMULASI

```
function varargout = program(varargin)
% PROGRAM MATLAB code for program.fig
%     PROGRAM, by itself, creates a new PROGRAM or raises the existing
%     singleton*.
%
%     H = PROGRAM returns the handle to a new PROGRAM or the handle to
%     the existing singleton*.
%
%     PROGRAM('CALLBACK', hObject, eventData, handles,...) calls the
local
%         function named CALLBACK in PROGRAM.M with the given
input arguments.
%
%     PROGRAM('Property','Value',...) creates a new PROGRAM or raises
%     the existing singleton*. Starting from the left, property value
pairs are
%     applied to the GUI before program_OpeningFcn gets called. An
%     unrecognized property name or invalid value makes
property application
%     stop. All inputs are passed to program_OpeningFcn via varargin.
%
% *See GUI Options on GUIDE's Tools menu. Choose "GUI allows only
one
% instance to run (singleton)".
%
% See also: GUIDE, GUIDATA, GUIHANDLES
