

## CHAPTER V

### CONCLUSION AND SUGGESTION

#### 5.1 Conclusion

Based on the previous chapter, the writer concludes that in conducting her research, the writer used research and development method of Sukmadinata's theory with three stages: preliminary study, model development and final testing. From the three stages of research and development method, the writer only did two stages which were preliminary study and model development. It was because the writer lacked of time, budget, and legality. In preliminary study, there were three steps that the writer did which were literature study, field study, and product draft design. From that theory the writer got comment from the expert, the writer then revised the recipes of *cuko*-filled *pempek* in the limited testing to make *cuko*-filled *pempek* for wider testing trials. The writer then gave *cuko*-filled *pempek* to two respondents of wider testing trial. The writer got the perfect and unique shape from *pempek*. As well as, the writer managed to make *cuko* with the right composition, so that it can be accepted by the three respondents from limited testing and wider testing. The writer finally managed to find the right shape and composition for the *cuko*-filled *pempek*.

#### 5.2 Suggestion

After the researcher had already got revision from wider testing, the product would be produced in a large scale. However, the researcher did not do it because the lack of time and budget. The writer believe that this innovation of *Cuko*-filled *pempek* would be procced the sale stages, because the products will be possible to consume for public, and the writer believe for the next researcher to make more perfect recipes of *cuko*-filled *pempek* more perfect with a more unique and interesting shapes.
